

VALENTISOFT · SaaS PLATFORM

Vacuum Control

QR-based housekeeping equipment control

Housekeepers report the status of every vacuum by scanning a QR code — no apps, no logins. Admins get automatic KPIs and reports.

The challenge: reporting and tracking equipment is scattered and manual

Manual reporting

The housekeeper reports verbally or on paper when a vacuum fails. It gets lost, forgotten, or reaches maintenance late.

No visibility

The supervisor has no real-time view of which equipment is operational, faulty, or out of service at each site.

Reports by hand

Consolidating the day's status and putting together the email for management is time-consuming and error-prone.

The result: equipment down longer, decisions made blind, and man-hours wasted on repetitive administrative tasks.

A simple flow: scan → report → visualize

1

QR on every unit

Each vacuum carries a QR sticker with its code (VAC-001...). Generated and printed from the panel.

2

The housekeeper scans

Opens a web page (no app, no login), picks their name and the equipment status. 30 seconds.

3

Logged instantly

The report is saved with time, employee and site. It feeds the KPIs automatically.

4

The admin decides

Dashboard with status distribution, most-reported units and an automatic daily email to management.

Multi-site and multi-client: each company gets its own subdomain (mastercorp.valentisoftware.com) and each site its own equipment, QRs and KPIs.

Sites panel

The central view of all the client's sites, each with its equipment count and its recipients.

- List of sites with their code, number of vacuums and report recipients.
- 3 shortcuts per row:  configure ·  KPIs ·  QR codes.
- Each site has a unique slug used in the public URLs (/XjUS3/...).
- Responsive: adapts to mobile by hiding secondary columns.

Sites

SITE	VACUUMS	
069	16	  
004	0	  
003	0	  
002	0	  

Configure a site and its equipment

This is where you set the site code, the recipients' emails (CC) and its vacuums.

- Edit code and recipients (email validation with an example if wrong).
- Add vacuums: numbered automatically (VAC-001, 002...).
- Confirmation before creating equipment to avoid mistakes.
- Shortcuts to the site's QR codes and Dashboard.

The screenshot shows the MasterCorp Admin interface. At the top, there's a header with the MasterCorp logo, the word 'Admin', and a user profile icon. Below the header, there's a navigation bar with a back arrow and the text 'Sites'. There are two tabs: 'QR codes' and 'Dashboard (KPIs)'. The main content area is divided into two sections. The first section is titled 'Site 069 /XjUS3'. It contains a 'Code' field with the value '069' and a 'Recipients (CC) — comma separated' field with the value 'ramces.rodriquez@mastercorp.com'. Below these fields is a 'Save changes' button. The second section is titled 'Vacuums (16)'. It displays a grid of 16 vacuum labels, from VAC-001 to VAC-016. Below the grid is an 'Add' button with a value of '1' and a label 'vacuums (numbered continuing from the last)'. There is also an 'Add' button at the bottom of this section.

QR code generator

Generates each unit's QR with the client's logo in the center, ready to print and stick.

- One QR per unit with the public URL ready to scan.
- Download one QR (PNG) or ALL of the site's in a printable PDF sheet.
- Fixed housekeeping-room QR to report 'equipment unavailable'.
- Copy-URL button and bilingual interface (EN/ES).

Report detail

Every check-in with employee, unit, time/date, status and note. Full traceability.

- Detail table with the record of every report in the period.
- Daily shows the time; weekly/monthly, the date.
- Separate 'equipment unavailable' section.
- Everything feeds the automatic daily email to recipients.

Scan a unit (no login)

What the housekeeper sees when scanning a vacuum's QR. Simple, in their language, nothing to install.

- Scan with the phone camera (iPhone or Android).
- See the client's branding and the unit (Vacuum · VAC-001).
- One button: 'Report'. EN/ES language switch.
- Works in any mobile browser.

Report equipment status

A 30-second form: who is reporting, what state the unit is in, and an optional note.

- Employee autocomplete (pick your name from the list).
- 3 color-coded states: Operational · With faults · Out of service.
- Optional note and photos when there is a problem.
- On submit, the record feeds the KPIs instantly.

Report 'equipment unavailable'

A fixed QR in the housekeeping room to flag when NO vacuum is available.

- Fixed QR posted in the room (not tied to a unit).
- The housekeeper scans and reports the shortage.
- Useful to detect equipment shortages per shift/floor.
- Counted separately in the dashboard.

Equipment-unavailable form

Employee, equipment type and comment. As simple as the status report.

- Employee autocomplete.
- Equipment type (Vacuum) pre-selected.
- Optional comment (e.g. 'no vacuums on floor 3').
- Recorded with time and site.

Man-hour savings and faster tasks

~90%

less time per report

From ~7 min (paper + manual entry)
to ~30 sec scanning a QR.

~40 min

per site per day

The daily report is no longer built by hand:
it is generated and sent on its own at 10
am.

~48 h

saved per site per month

Adding up reports + consolidation.
With 5 sites: ~240 h/month (~30 man-
days).

Plus value that is hard to measure in hours:

- Faster maintenance: faulty equipment is detected instantly, not at the end of the shift.
- Data-driven decisions: real-time visibility of availability per site.
- Fewer errors: no lost paper and no manual transcription.
- Scales with no extra management cost: adding sites or equipment is immediate.

Why Vacuum Control

Zero friction for the operator

No apps, no logins: scan and report in seconds, in their language.

Real-time visibility

Per-site KPIs, an automatic daily email and full traceability.

Multi-site and multi-client

One subdomain per company, unlimited sites, each with its own equipment.

Secure and self-service

Encrypted passwords, code-based recovery, admin roles.

Print-ready

QRs with the client's branding, PDF sheets and a fixed housekeeping QR.

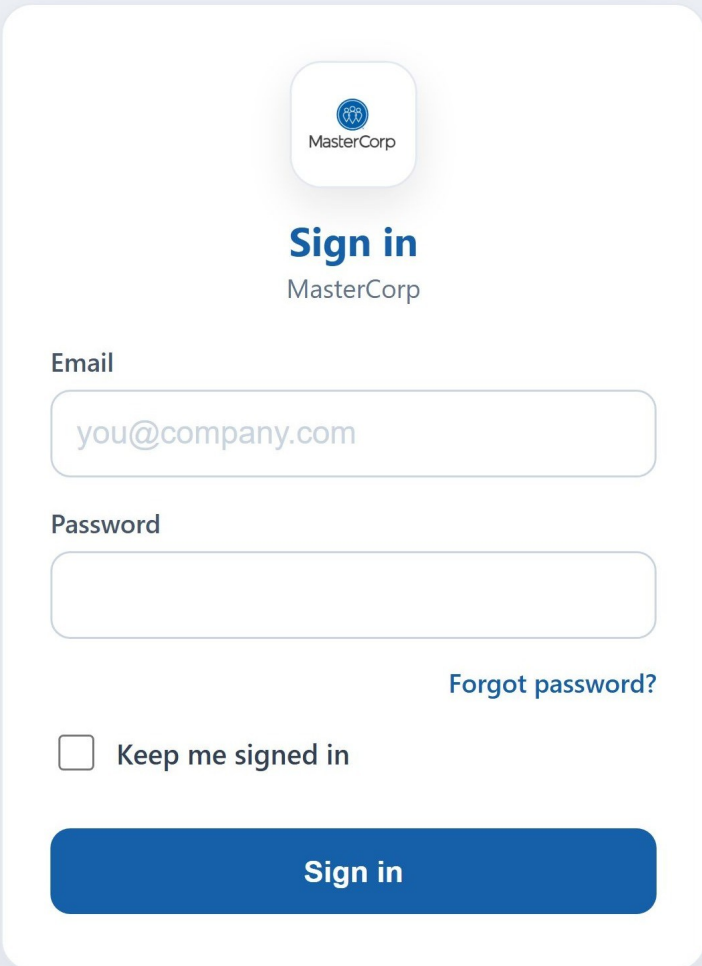

Measurable savings

Fewer man-hours on reporting and consolidation; faster maintenance.

Secure per-client sign-in

Each client signs in through its subdomain with its own branding. Encrypted passwords (PBKDF2) and a persistent session.

- The admin opens mastercorp.valentisoft.com and sees the login with their company logo.
- Enters email and password; long session (does not expire in normal use).
- Admin roles at the tenant level (e.g. Chris David, Ramces Rodriguez).
- Session invalidated when the password changes (account protection).

The image shows a sign-in form for MasterCorp. At the top, there is a logo consisting of a blue circle with three white dots inside, and the text "MasterCorp" below it. Below the logo, the text "Sign in" is displayed in a large, bold, blue font, with "MasterCorp" in a smaller, regular blue font underneath. The form has two input fields: "Email" and "Password". The "Email" field contains the placeholder text "you@company.com". The "Password" field is empty. To the right of the "Password" field, there is a link that says "Forgot password?". Below the password field, there is a checkbox labeled "Keep me signed in". At the bottom of the form, there is a large blue button with the text "Sign in" in white.

Sign in

Password recovery

If an admin forgets their password, they recover it on their own, without relying on support.

- 'Forgot password?' → enter your email.
- Receive a 6-digit code by email (expires in 15 min).
- Enter the code and set the new password.
- Per-IP rate limiting against brute force; does not reveal whether the email exists.

Reset password

Enter your account email and we'll send you a 6-digit verification code.
